

TRANSLATION IN MECHANICAL ENGINEERING

Do you have a document in mechanical engineering that needs to be translated?

ELC Professional Center can assist you.

Whether it is a technical presentation, instruction sheets, user manuals, repair manuals, brochures or other documents, our translators, who can use your terminology, are very knowledgeable in the field of mechanical engineering.

We know how important it is that each translation corresponds the original.

For example, you want to manufacture machines in the United State. The assembler, who is onsite, can misunderstand the assembly instructions if the latter contain erroneous information. Thus, your machine will not work.

To avoid a similar situation, get your documents translated by a professional who knows the terminology in mechanical engineering. They are native speakers, thus ensuring a translated text that uses proper terminology. Every user manual is easy to understand and you avoid worrying about potential damages.

Here are some examples of the various types of documents we are able to translate:

- Robotics,
- Machine-tool,
- Optical devices,
- Sheeter,
- Laser devices,
- Pumps,
- Training manuals and data sheets,
- Maintenance manuals,
- Technical information,
- General procedures,

- Technical automobile procedures,
- Industrial mechanics,
- Motor reports and notes,
- Internal journals.
