

MEDICAL TRANSLATION

Do you have a medical or pharmaceutical document (article, brochure, documentation, etc.) that needs to be translated?

In today's society, sharing and internationalizing resources, technologies and medical procedures, medical and pharmaceutical documentation has not stopped growing and developing. Thus, the demand for medical translation has also grown.

The challenge with regards to responsibility is very important, and this is a field that is difficult to capture (differences between the source language and the output language, syntax difficulties, etc.). So, attention to detail is a must.

Our competent and specialized translators know medical terminology, their vast experience in this field is very complex. They frequently translate various types of documents for hospitals, doctors and individuals:

- Patents,
- Health and safety files,
- Medical and scientific documents,
- Best practices,
- Case studies,
- Academic articles and medical journals,
- Toxicity studies,
- Clinical trials,
- Procedures,
- User manuals,
- Maintenance manuals,
- Medical analyses and reports,
- Chemical and pharmaceutical documents,
- Product sheets,
- Texts regarding regulations,
- Minutes of conference meetings,
- Expert publications,
- Commercial documents containing medical information.

A medical glossary is very important: a bad translation can bring forth legal action, even put someone's life in danger. It can also cause serious repercussions to patients, users of medical devices and even professionals.

At **ELC Professional Center**, our specialized translators master both the source and output languages, offering a translation that meets your expectations.
